ENGINEERING MATERIALS

An eraser is made of rubber. Rubber is an engineering material. If you bend it between your fingers it changes shape. When you release it, it regains its original shape. Rubber is very elastic. Elasticity is a property of some engineering materials.

If you hit a piece of glass it breaks. Glass is very brittle. Brittleness is a property of glass.

Nails are made of a tough material. If you hit one with a hammer it doesn't break.

Electrical wires are covered with plastic. Plastic is a bad conductor of electricity. If you touch the plastic you don't receive an electric shock. The wire is made of copper. Copper is a good conductor of electricity. Plastic, however, is an insulator. Copper is also a good conductor of heat.

You can't scratch glass easily. However, if you scratch an aluminium saucepan with a nail it leaves a mark. Glass is a hard material but aluminium is quite soft.
